

Acknowledgements

This research was conducted with supports from many people. I thank my PhD supervisor, Professor Yukinori Matsukura, University of Tsukuba, for valuable discussion, guidance, and encouragement. Suggestions from Professor Eiji Matsumoto, Professor Masamu Aniya, Professor Hiroshi Ikeda, Dr. Norikazu Matsuoka, and Dr. Kenshiro Yamamoto, University of Tsukuba, are very helpful.

The experimental work would not have been possible without help from people in various institutes and universities. I am most grateful to Professor Takasuke Suzuki, Dr. Shoichi Hachinohe, Mr. Takashi Akiyama and Mr. Yasuo Takase, Chuo University, for measuring pore-size distribution. I am also grateful to Dr. Hiroshi Isobe, Japan Atomic Energy Research Institute, for allowing me to use a visible microspectrometer and for valuable instructions and discussion on colour measurements. Chemical and mineralogical analyses were performed under assistance of Dr. Kose Komuro, University of Tsukuba, and Dr. Tamao Hatta, Japan International Research Center for Agricultural Sciences. I thank Dr. K. Komuro and Dr. T. Hatta as well as Mr. Yasuhiko Takaya, Mr. Ryo Kunikata, Mr. Takeshi Noda, Mr. Mutsuhito Suzuki, and Ms. Nao Maeda, Tsukuba University for their help with sampling gravels. I am grateful to Dr. Kazuyuki Koike, Komazawa University, and Dr. Takehiko Suzuki, Tokyo Metropolitan University, for some pieces of advice on terrace classification and the absolute ages for terrace formation.

Special thanks are due to Dr. Helen P. Jarvie, Institute of Hydrology in Great Britain, for proof reading of a draft. I am also grateful to my colleagues, Dr. Takashi Hirose, in Ryukyu University, and Mr. Ken'ichi Nishiyama, Mr. Yasuhiko Takaya, and Mr. Hisashi Aoki, in University of Tsukuba, for their support and encouragement. This research has been financially supported by Fukada Geological Institute in 1994-5 and JSPS Research Fellowship for Young Scientists in 1997-1998. While this research was ongoing, my son, Kei

often encouraged me with his smile. Without him, study for my PhD would not have been enjoyable. Many thanks to my husband, Takashi, for his support and for reading an early draft.
