Neurophysiological Studies on the Control Mechanisms of the Pheromone-Triggered Behavior in the Silkmoth

January 2005

Satoshi WADA
Neurophysiological Studies on the Control Mechanisms of the Pheromone-Triggered Behavior in the Silkmoth

A Dissertation Submitted to
the Graduate School of Life and Environmental Sciences,
the University of Tsukuba
in Partial Fulfillment of the Requirements
for the Degree of Doctor of Philosophy in Science
( Doctoral Program in Functional Biosciences )

Satoshi WADA
# Table of Contents

1. List of Abbreviations ........................................................................................................... 3

2. Abstract .............................................................................................................................. 5

3. Introduction ......................................................................................................................... 7

4. Materials and Methods ...................................................................................................... 14
   4.1 Animals ............................................................................................................................ 14
   4.2 Olfactory and visual stimuli ............................................................................................. 14
   4.3 Physiology ....................................................................................................................... 15
   4.4 Double-labeling a single GI or GII DN with of the cvl-NMN ................................. 16
      4.4.1 Backfilling of the cvl-NMN ................................................................................... 16
      4.4.2 Intracellular staining of a single GI or GII DN ...................................................... 17
   4.5 Confocal microscopy ...................................................................................................... 18

5. Results .................................................................................................................................. 20
   5.1 General morphological characteristics of GI and GII DNs ........................................ 20
   5.2 Morphology of the cvl-NMN ......................................................................................... 22
   5.3 Double-labeling of GI, GII DN with cvl NMN ............................................................ 22
      5.3.1 GI-A DNs ............................................................................................................... 23
      5.3.2 GI-B DNs ............................................................................................................... 24
