Contents

1 Introduction **1**
- 1.1 Motivation . . . 1
- 1.2 Background . . . 3
  - 1.2.1 Induction . . . 3
  - 1.2.2 Analogical reasoning . . . 4
  - 1.2.3 Abduction . . . 6

2 On Induction **9**
- 2.1 Introductory remarks . . . 9
- 2.2 Feature subset selection problem . . . 9
- 2.3 New explanation-based method . . . 10
  - 2.3.1 The heuristic function H . . . 10
  - 2.3.2 Greedy algorithm . . . 12
- 2.4 Experimental results . . . 13
  - 2.4.1 UCI and UCI-derived datasets . . . 13
  - 2.4.2 Artificial datasets . . . 16
- 2.5 Related works . . . 18
  - 2.5.1 "Relief" . . . 18
  - 2.5.2 "Wrapper model" . . . 19
  - 2.5.3 Experiments for comparison . . . 20
  - 2.5.4 Explanation-based learning . . . 24
- 2.6 Theoretical background . . . 25
  - 2.6.1 Properties of feature . . . 25
  - 2.6.2 Why the wrapper model works . . . 25
  - 2.6.3 L-useful feature subset . . . 26
  - 2.6.4 L-usefulness and the heuristic function . . . 27
- 2.7 Discussions and concluding remarks . . . 28

3 On Analogical Reasoning **31**
- 3.1 Introductory remarks . . . 31
- 3.2 Creative thinking as machine learning problem . . . 32

3.3 Paraphrasing-based analogical reasoning (**PAR**) 36
3.3.1 Definition of **PAR** 36
3.3.2 Related works 41
3.4 Discussions 42
3.4.1 Input to the system 42
3.4.2 Examples when **PAR** does not work well 46
3.5 Examples 48
3.5.1 "Meat and fish" partition 48
3.5.2 "Block and slice" partition 50
3.6 Summary 51

4 Creativity Support System **53**
4.1 Introductory remarks 53
4.2 Model of creative thinking in "Chie-no-Izumi" 54
4.2.1 Modeling creative thinking 54
4.2.2 Paraphrasing-based analogical reasoning 54
4.3 Prototype of "Chie-no-Izumi" 56
4.3.1 Designing the prototype 56
4.3.2 Input system of the prototype 58
4.3.3 Automatic selection of external tokens 60
4.3.4 Designing output system 63
4.4 Creativity support by "Chie-no-Izumi" 65
4.4.1 "Chie-no-Izumi" for industrial use 65
4.4.2 Evaluation of experiments 68
4.5 Summary 71

5 On Abduction **73**
5.1 Introductory remarks 73
5.2 Analogical reasoning as a form of abduction 76
5.2.1 Generalized stable model semantics for abduction . . . 76
5.2.2 How to convert analogical reasoning into an abductive framework 78
5.3 GSM semantics for analogical reasoning 81
5.3.1 Basic definitions 81
5.3.2 Active usage of p-exception 87
5.4 Analogical proof procedure 87
5.5 The related work 89
5.6 Summary 90

6 Conclusion **93**

Acknowledgments **95**

Bibliography **97**
