Executive summary of this book Michio AOYAMA 1

Chapter 1: Overview of the Fukushima Dai-ichi Nuclear Power Station accident and global distribution of artificial radioactivity before 2011

..... Michio AOYAMA and Yayoi INOMATA 13

1.1	Introduction.....	14
1.1.1	The TEPCO Fukushima Dai-ichi Nuclear Power Station	
1.1.2	The earthquake and tsunami, and the accident at the F1NPS	
1.1.3	Mass balances of F1NPS-released radionuclides	
1.1.3.1	Radiocaesium	
1.1.3.2	Radiostrontium	
1.1.3.3	Tritium	
1.1.3.4	Plutonium isotopes	
1.1.4	Previous releases from nuclear weapons tests, nuclear facility accidents, and nuclear fuel reprocessing plants	
1.2	Source of radionuclides in the ocean	27
1.3	Spatiotemporal variations of ^{137}Cs in surface seawater in the world oceans	30
1.3.1	The Pacific Ocean	
1.3.2	Indian Ocean and Antarctic Ocean	
1.3.3	Atlantic Ocean	
1.3.4	Source region of nuclear reprocessing plants	
1.3.5	North Sea and Northern North Atlantic Ocean	
1.3.6	The Arctic Ocean, Barents Sea and coast of Norway, and Baltic Sea	
1.3.7	The Mediterranean Sea and Black Sea	
1.4	Apparent half residence time of ^{137}Cs from 1970 to 2010 in the world oceans	38
1.5	Temporal variations in ^{137}Cs inventory in the surface mixed layer in the world ocean just before the F1NPS accident.....	39
1.6	Three-dimensional distribution of ^{137}Cs in the North Pacific Ocean before the F1NPS accident.....	41
1.7	Chapter summary	44

Chapter 2: Ten-year long-range transport of radiocaesium in the surface layer in the Pacific Ocean

.....	Michio AOYAMA, Yuichiro KUMAMOTO and Yayoi INOMATA	57
2.1	Introduction.....	58
2.2	HAMGlobal2021 dataset.....	59
2.3	Surface current system in the North Pacific and the Arctic Oceans and its marginal seas.....	60
2.4	History of ^{137}Cs activity concentration in surface water before the F1NPS accident in the North Pacific.....	62
2.5	Atmospheric Transport and direct discharge as sources of radionuclides originated from F1NPS accident to the North Pacific.....	64
	2.5.1 Atmospheric transport models	
	2.5.2 Simulation results	
2.6	Initial observation results until December 2012.....	66
2.7	Observation results during ten years, from 2011 to 2021, in the North Pacific Ocean, the Bering Sea, and the Arctic Ocean.....	74
	2.7.1 The North Pacific Ocean	
	2.7.2 West Coast of the American continent	
	2.7.3 The Bering Sea, the Chukchi Sea, and the Arctic Ocean	
	2.7.4 The Okhotsk Sea	
	2.7.5 The Hawaii Islands	
	2.7.6 In the Subtropical gyre including the Ogasawara region	
	2.7.7 Yonaguni Island at the entrance of the Eastern China Sea	
	2.7.8 Meridional distribution changes from 2011 to 2021	
2.8	Overview of the time scale of Lagrangian transport of radiocaesium derived from F1NPS accident.....	85
2.9	^{90}Sr in the western North Pacific Ocean.....	89
2.10	Plutonium isotopes in the North Pacific Ocean.....	90
2.11	Anthropogenic ^{129}I in the North Pacific, Bering and Chukchi Seas, and Arctic Ocean.....	91
2.12	The activity ratio of ^{134}Cs to ^{137}Cs in surface water.....	91
2.13	Issues unclear and issues remains as future tasks and studies.....	92
2.14	Chapter summary.....	93

Chapter 3: Radiocaesium in the ocean interior as mode waters in the North Pacific

..... Hideki KAERIYAMA, Michio AOYAMA
and Yuichiro KUMAMOTO 103

3.1	Introduction.....	104
3.2	Mode waters in the North Pacific.....	104
3.2.1	Subtropical Mode Water	
3.2.2	Central Mode Water	
3.2.3	Other mode waters in the North Pacific	
3.3	Radiocaesium in mode waters before the FINPS accident.....	108
3.4	Radiocaesium in STMW released from the FINPS accident	109
3.4.1	FINPS-derived radiocaesium in STMW formation region during the first two years	
3.4.2	FINPS-derived radiocaesium in STMW distribution region during the first two years	
3.4.3	Dilution and widespread distribution in STMW after 2013	
3.4.4	Total amount of radiocaesium in the STMW released from FINPS	
3.5	Radiocaesium in other mode waters	124
3.6	Chapter summary	126

Chapter 4: Transport of radiocaesium from the North Pacific Ocean into the Japan Sea via the Eastern China Sea by an unrecognized shorter transport route

..... Yayoi INOMATA, Michio AOYAMA
and Shigeyoshi OTOSAKA 133

4.1	Introduction.....	134
4.2	Data and methods.....	135
4.3	Increased ^{137}Cs activity concentrations in the surface seawater of the Japan Sea and the Eastern China Sea.....	136
4.4	Time lag of ^{137}Cs propagation from the Eastern China Sea to the Japan Sea	138
4.5	Intrusion of ^{137}Cs into the Eastern China Sea from the subsurface layer	139
4.6	Signature of FINPS- ^{137}Cs flowed into the Japan Sea from the western North Pacific Ocean characterized by the $^{134}\text{Cs}/^{137}\text{Cs}$ ratio	143
4.7	Temporal variations of FINPS- ^{137}Cs activity concentrations	143
4.8	Estimation of FINPS- ^{137}Cs inflow amount into the Japan Sea from the western North Pacific Ocean until 2020.....	146
4.9	Chapter summary	148

Chapter 5: Radiocaesium and other radionuclides in the coastal region of Fukushima

..... Michio AOYAMA, Hideki KAERIYAMA
and Daisuke TSUMUNE 153

5.1	Introduction.....	154
5.2	Source terms of radionuclides stemming from the F1NPS accident in the Fukushima coastal region.....	156
5.2.1	Direct release behaviour through stagnant water	
5.2.2	Estimation of the total amount of direct release and initial atmospheric deposition	
5.2.3	Estimation of the total amount of direct release at the end of 2020	
5.3	Radiocaesium behaviour in seawater in the Fukushima coastal region from March 2011 until 2021	159
5.3.1	Radiocaesium concentrations close to the F1NPS site and a few stations north and south of F1NPS site from March 2011 to 2021	
5.3.2	Horizontal distribution just after the accident via DOE/USA airborne monitoring	
5.3.3	Riverine flux and particle form of radiocaesium in the coastal region	
5.4	³ H behaviour in the Fukushima coastal region	170
5.4.1	Direct discharge of ³ H because of the F1NPS accident: the total amount of ³ H and ³ H activity concentration close to the F1NPS site	
5.4.2	³ H activity concentration trend at the coast of Fukushima since the 1980s	
5.5	⁹⁰ Sr and plutonium isotopes	172
5.5.1	⁹⁰ Sr behaviour in the F1NPS site and coastal region	
5.5.2	Plutonium isotopes in the coastal region	
5.6	Unclear issues and future tasks and studies	176
5.7	Chapter summary	177

Chapter 6: Radiocaesium in the seabed sediments off Fukushima

..... Shigeyoshi OTOSAKA, Daisuke TSUMUNE
and Michio AOYAMA 185

6.1	Introduction.....	186
6.2	Types and activity concentrations of accident-derived radionuclides detected from sediments.....	186
6.3	Seafloor around Fukushima before F1NPS accident	190
6.3.1	Sediment characteristics	

6.3.2	Activity concentration of radionuclides before the FINPS accident	
6.4	Accumulation of radiocaesium on the seafloor immediately after the FINPS accident (2011-2012)	193
6.4.1	Lateral distribution of ^{137}Cs activity concentration	
6.4.2	Vertical distribution	
6.4.3	Total amount of radiocaesium in sediment	
6.4.4	Heterogeneity	
6.4.5	Particle size dependence	
6.4.6	Topography dependence	
6.5	Initial deposition process	200
6.6	Adsorption mechanism/existence form	202
6.7	Long term change	205
6.7.1	General characteristics of temporal change of radiocaesium concentration in sediment	
6.7.2	Effects of vertical mixing of sediments	
6.7.3	Effects of resuspension and horizontal transport	
6.7.4	Effects of desorption of radiocaesium from sediments	
6.8	Chapter summary	208

Chapter 7: Radio-caesium behaviour in marine organism before and after the Fukushima Dai-ichi Nuclear Power Station Accident

..... **Yutaka TATEDA, Hideki KAERIYAMA
and Michio AOYAMA 219**

7.1	Introduction	220
7.2	Radio-caesium in zooplankton	221
7.2.1	Before the FINPS accident	
7.2.2	After the FINPS accident	
7.3	Radio-caesium in macro-algae	227
7.3.1	Temporal ^{137}Cs radioactivity level in macro-algae from Japanese coastal waters	
7.3.2	Determining factors of radio-caesium levels in macro-algae after 2011	
7.4	Radio-caesium in invertebrates	232
7.4.1	Temporal ^{137}Cs radioactivity levels in mollusc of Japanese coastal waters	
7.4.2	Temporal ^{137}Cs radioactivity level in crustaceans from Japanese coastal waters	
7.4.3	Temporal ^{137}Cs radioactivity levels in cephalopods from Japanese coast-	

al waters	
7.4.4 Controlling factors of radio-caesium radioactivity levels in invertebrates	
7.5 Radio-caesium in marine fish.....	238
7.5.1 Radio-caesium in surface water fish of Japanese coastal water	
7.5.2 Radio-caesium in epi-pelagic fish of the Japanese coastal waters	
7.5.3 Radio-caesium in demersal fish from the Japanese coastal waters	
7.5.4 Controlling factors of radio-caesium radioactivity levels in fish	
7.5.5 Radio-caesium in migratory fish of the western Pacific Ocean	
7.6 The F1NPS accident originated other radionuclides in marine biota	252
7.6.1 Radio-iodine ^{131}I	
7.6.2 Radio-strontium ^{90}Sr	
7.6.3 Radio-silver $^{110\text{m}}\text{Ag}$	
7.6.4 Tritium ^3H	
7.7 Chapter summary	256

Chapter 8: Oceanic simulation for the Fukushima Dai-ichi Nuclear Power Station accident

..... **Daisuke TSUMUNE and Michio AOYAMA 279**

8.1 Introduction.....	279
8.2 Regional scale models.....	281
8.2.1 Flow field	
8.2.2 Modelled behaviour of ^{137}Cs in the ocean	
8.2.3 Source terms to the ocean	
8.2.4 Estimation of direct release rate	
8.2.5 Effect of atmospheric deposition	
8.2.6 Effect of river discharge	
8.2.7 Behaviour of ^{137}Cs in the ocean	
8.2.8 Sediment models	
8.3 Model intercomparison	304
8.4 Box models	304
8.5 Basin scale models	307
8.6 Other radionuclides	309
8.6.1 Behaviour of Pu isotope in the ocean	
8.6.2 Pu isotope model	
8.6.3 Pu isotope fallout distribution	
8.6.4 Distribution of Pu isotope	

8.7	Emergency response systems.....	318
8.8	Chapter summary	319
	Index	327
