

Contents

Preface	vii
1 CLIMATOLOGY AND OCEANOLOGY	1
1.1 Climatology and Climate System Study	1
1.2 Overview of the Dynamical Framework	3
1.3 Examining Ocean and Atmospheric General Circulation	4
1.3.1 The ocean mixed layer and thermocline	4
1.3.2 Sea surface height and ocean temperature	6
1.3.3 Velocity potential and the stream function	12
1.3.4 Spatial structure of convective activity	18
2 OCEAN DYNAMICS REQUIRED IN CLIMATOLOGICAL RESEARCH	23
2.1 The El Niño Phenomenon	23
2.1.1 Overview of air-sea coupled systems	23
2.1.2 Direct and indirect impacts	32
2.1.3 Three types of oscillator theory	34
2.2 Wind-driven Circulation in the Surface Layer	38
2.2.1 Ekman transport	38
2.2.2 Sverdrup transport	45
2.2.3 Applied examples of Sverdrup transport	47
(a) Recharge-discharge oscillator theory	47
(b) Western boundary currents	49
2.3 Ocean Waves	51
2.3.1 Kelvin waves	51
2.3.2 Rossby waves	57
2.4 Air-sea Coupled Systems	58
2.4.1 Delayed oscillator	58
2.4.2 Forecasting the El Niño phenomenon and intraseasonal oscillations	60
(a) Period	60
(b) Intraseasonal variations	61
2.4.3 WES feedback and the northward displaced ITCZ	63
2.5 Air-sea Interaction in the Indian Ocean	69
2.5.1 Indian Ocean dipole mode	70
2.5.2 ENSO and equatorial monsoon coupling	73

2.5.3 The Indian Ocean capacitor effect	80
3 MONSOON CLIMATE DYNAMICS	89
3.1 Classical Concepts and New Interpretations	89
3.1.1 Large-scale land-sea breeze circulation theory	89
3.1.2 Atmospheric response to heating	93
3.1.3 Determination of heating— Q_1 and Q_2 method—	103
(a) Thermodynamic equation and the law of conservation of water vapor	103
(b) Vertical eddy heat transport due to cumulus convection	108
3.2 Seasonal Variation	116
3.2.1 Differences in regional characteristics	116
3.2.2 Air-sea interaction	122
(a) Convection jump and sea surface temperature in mid-July	122
(b) Factors leading to variations in sea surface temperature	127
(c) Onset of broad-scale monsoon	129
(d) Seasonal progression as a coupled air-sea-land system	134
3.3 Interannual Variation	138
3.3.1 Progress relating to the ENSO-monsoon theory	138
3.3.2 Factors controlling the summer weather in Japan	148
(a) Stationary Rossby waves	149
(b) The Pacific high	157
3.3.3 Variations in the winter snowpack in Japan	162
3.4 Variations on Various Time Scales	165
3.4.1 Forecasting global warming	165
(a) Summer monsoon	166
(b) Seasonal variation until mid-summer and the seasonal rain front	167
(c) The winter monsoon	172
3.4.2 Approach from paleoclimate research	177
(a) The earth's orbital elements and variations in insolation	179
(b) Past warm period and cold periods	186
3.4.3 Diurnal variation	192
Postscript	205
Appendix	207
Index	213
