## **Abstract**

This study was done to examine the formation and transformation processes of Japanese enclaves in Shanghai based on two aspects: (1) the development of Japanese residences and facilities from a spatial perspective, and (2) the settlement patterns of Japanese expatriates based upon their attributes, from a social perspective.

Since the Japanese post-war economic boom, migration of the Japanese to overseas has become more frequent. Before the Second World War, many of the Japanese were migrant labor, but later majority of the Japanese started to work globally due to the assignment by Japanese Headquarters. These Japanese expatriates have been studied from two perspectives. Firstly, the studies from social perspective have focused on the characteristics of Japanese communities overseas based upon Japanese socioeconomic attributes. Secondly, the studies from spatial perspective have focused on the spatial transformation of Japanese enclaves in Western and newly industrializing countries, by mainly analyzing the Japanese residences and facilities. However, many questions remain unanswered in the previous studies due to the following reasons. Firstly, the studies did not focus on both the social and spatial perspectives. Secondly, most of the studies have been conducted in English-speaking countries, so little is known about the Japanese enclaves in non-English-speaking countries. Thirdly, the studies focused more on the overseas resident businessmen and locally hired Japanese rather than the self-employed who were also important for the development of Japanese enclave.

Shanghai was chosen as the study area, as it has accepted most of the Japanese expatriates (57,458 in 2012) in China, and the two largest Japanese enclaves in Gubei and Pudong areas were chosen as case studies.

The Japanese enclave in the Gubei area had a specific formation pattern, which was significantly affected by China's immigration and economic policies. The foreigners were not allowed to choose their residences and had to live only in the foreign residences in Gubei according to the Chinese immigration policy until 2002. This directly affected the formation of Japanese enclave in the Gubei area. Since 2003, the

Japanese enclave expanded due to the accumulation of Japanese facilities. The Japanese facilities were important for the Japanese to overcome language and cultural barriers and maintain Japanese lifestyle. However, it is prudent to note that the Japanese-owned facilities increased in the number since 2004 with the permission to be established by Chinese policies. With the accumulation of Japanese facilities in the Japanese enclave, the ethnic commercial function also developed. This attracted more Japanese residents and facilities, which stimulated the further expansion of the Japanese enclave.

On the other hand, the Japanese enclave in the Pudong area had a different formation pattern due to several reasons. This mainly included liberty to choose their residences, and the increase in establishment of Japanese companies due to the economic policies of China and Shanghai. This Japanese enclave became increasingly important with the establishment of a Japanese school, as the Japanese school was a top priority in the residential choices for Japanese expatriates having children. However, the Japanese enclave in Pudong was characterized as a residential space due to the underdevelopment of Japanese-owned facilities, because most of the self-employed Japanese were more interested to live and work in the Gubei area.

In conclusion, although the Japanese enclaves in both the Gubei and Pudong areas were formed in the same city of Shanghai, their formation pattern and transformation process varied considerably due to different formation factors. Mostly, the formation and transformation processes of Japanese enclaves in Shanghai were affected by China's policies, in comparison to the Japanese enclaves in other foreign countries. In addition, the further development of Japanese enclaves in Shanghai is likely to be affected by the Japanese companies in future. Therefore, further investigation should be made on the transformation process of Japanese enclaves.

Key words: Japanese enclave, Japanese residences, Japanese facilities, settlement pattern, formation and transformation processes, Shanghai
