Contents

1. Introduction	1
Preface: memory taxonomy in human	1
1.1. Learning deficits following physical tissue lesion of the striatum and hippocampus	5
1.1.1. Striatal lesion	5
1.1.2. Hippocampal lesion	11
1.1.3. Functional dissociation of striatal and hippocampal systems	15
1.2. Deficits following lesion of the brain cholinergic systems	22
1.2.1. Neurotoxin administration	28
1.2.2. Ligands administration	35
1.2.3. Aging	36
2. Purpose of present study	39
3. General method	41
4. Alteration of the striatal and hippocampal cholinergic systems following AF64A injection	44
4.1. Histology: Acetylcholinesterase staining [Exp. 1]	45
4.2. Biochemical analysis: HPLC study [Exp. 2]	48
5. Striatal and hippocampal cholinergic functions in spatial localization	58
5.1. Retention of 8-arm radial maze behavior [Exp. 3]	58
6. Functional dissociation of the striatal and hippocampal cholinergic systems in spatial localization	73
6.1. Retention of EL and AL tasks in plus maze behavior [Exp. 4]	73
6.2. Acquisition of EL and AL tasks in plus maze behavior [Exp. 5]	91
7. Striatal and hippocampal cholinergic functions with regard to "retrieval" and "encoding" of the task-solving strategies	101
7.1. Effect of overtraining on EL and AL behavior [Exp. 6]	101
8. General discussion	120
9. Summary	131
