

Acknowledgement

I wish to express my sincerest gratitude to Professor Hiroshi Noda, my academic adviser, for all the support and guidance he has given me during the course of my Ph.D. dissertation. I wish also to thank Dr. Hiro'o Natori, my previous adviser, whose able supervision of my M.S. thesis prepared me for the demands of Ph.D. graduate work. I am also grateful to Dr. Hodaka Kawahata of the Geological Survey of Japan for providing the core samples and for the oxygen isotope analysis necessary for my study. My deepest gratitude to Professors Kenshiro Ogasawara and Yujiro Ogawa whose suggestions and recommendations have always been welcome and much appreciated; to Professor Yoshimichi Kajiwara and his laboratory for the assistance and use of their facilities; to Professor Tadamichi Oba of the Hokkaido University for a very fruitful discussion on the subject of carbonate dissolution; to Dr. Mamoru Enjoji, Dr. Meliton S. de los Santos, and Mr. Norimasu Nishida for their technical guidance in my attempts to do EPMA analysis; and to Mr. Ohno of the University of Tsukuba Institute of Medical Sciences for his assistance in taking SEM photomicrographs. I wish also to specially thank Dr. Ken'ichi Ohkushi for providing almost all the information and materials I needed and for critically reviewing my manuscript; Dr. Shungo Kawagata for his numerous assistance and most specially for his help in the factor analysis; and

Mr. Yukito Kurihara for his patience in translating Japanese information into English during the entire course of my graduate life in Japan.

I wish also to thank the following people not only for their help but also for the much needed company they have provided: Ms. Dewi Syavitri Hussein and Mr. Muhammed Yousaf, colleagues in the field of planktic foraminiferal studies, Japanese culture, and language; Ms. Elsa R. Lopez, who generously shared her time in making my plates and her color printer; Ms. Carina de Guzman for her skilful rendition of several of my figures; Mr. and Mrs. Aguilar for maintaining an open house for their friends; and to my next-door neighbours for bearing with my incessant guitar playing.

My graduate studies in Japan would not have been possible without the support of the Japanese Ministry of Education and Culture (MONBUSHO).

This work is dedicated to my family, specially to my father Leopoldo V. de Silva Sr., who passed away before the completion of this humble undertaking.
