**Micrometeorological and Ecological Analyses of Energy  
Budget and CO<sub>2</sub> Flux over a C3 and C4 Co-existing  
Grassland under Global Warming Conditions**

Sheng-Gong LI

A dissertation submitted to the Doctoral Program in Biological Sciences,  
the University of Tsukuba in partial fulfillment of the requirements for  
the degree of Doctor of Philosophy (Science)

# CONTENTS

Contents .....	i
Abstract .....	iii
List of Tables .....	v
List of Figures .....	vi
List of Symbols .....	viii
List of Abbreviations .....	x
<b>1. General Introduction</b> .....	<b>1</b>
1.1 The global warming and terrestrial ecosystems .....	1
1.2 Techniques to deal with the relationship between the atmosphere and terrestrial ecosystems .....	2
1.2.1 Simulation and modeling .....	2
1.2.2 Enclosure techniques .....	3
1.2.3 Micrometeorological techniques .....	4
1.3 Grassland in context of the global terrestrial ecosystems .....	5
1.4 Purposes of the present study .....	7
1.5 Composition of this paper .....	9
<b>2. Materials and Methods</b> .....	<b>10</b>
2.1 Site descriptions .....	10
2.2 Measurements of canopy-scale eddy flux densities .....	14
2.3 Supporting measurements of fluxes .....	20
2.4 Measurements of canopy height and leaf area index .....	21
2.5 Measurements of leaf-scale fluxes .....	22
2.6 Calculation .....	23
2.6.1 Flux densities .....	23
2.6.2 Conductances .....	27
2.6.3 Omega factor .....	28
2.6.4 Priest-Taylor coefficient .....	29
2.6.5 Bowen ratio .....	30
2.6.6 Evaporative fraction and dryness index .....	30
2.6.7 Water use efficiency .....	30
2.7 Data screening criteria .....	31
<b>3. Results</b> .....	<b>33</b>
3.1. Grassland microenvironment in 1999 .....	33
3.2 Canopy height and leaf area index in 1999 .....	39

3.3 Performance of the eddy flux measurement system.....	42
3.4 Diurnal patterns of the partitioning of available energy .....	49
3.5 Seasonal dynamics of the partitioning of available energy .....	57
3.6 Diurnal patterns of net canopy CO <sub>2</sub> flux density over the grassland .....	59
3.7 Seasonal dynamics of the net canopy CO <sub>2</sub> flux density.....	69
3.8. Water use efficiency (WUE) .....	73
<b>4. General Discussion</b>	<b>75</b>
4.1 Performance of the eddy correlation measurement system .....	75
4.2. Determinants for the available energy-partitioning pattern .....	79
4.3 Determinants for the net canopy CO <sub>2</sub> flux density .....	87
4.3.1 $F_c$ in relation to ET.....	87
4.3.2 Dependence of $F_c$ on canopy surface conductance.....	89
4.3.3 Responses of $F_c$ to PPFD .....	96
4.3.4 Nighttime $F_c$ .....	103
4.3.5 Water use efficiency and its affecting factors .....	108
4.4 Comparisons with leaf level CO <sub>2</sub> fluxes.....	110
<b>5. Summary and Conclusions</b>	<b>121</b>
<b>Appendices</b>	<b>126</b>
<b>Acknowledgements</b>	<b>131</b>
<b>References</b>	<b>133</b>
