

Acknowledgments

The encouragement and support of Dr. Ryuichi Ikeda, Professor of University of Tsukuba, is greatly appreciated. Under his guidance, I could learn experimental as well as theoretical knowledges on nuclear magnetic resonance, solid state physics and the other related fields.

The author wishes to the most sincere thank Dr. Shin'ichi Ishimaru in University of Tsukuba for many helpful discussions and suggestions in my studies of nuclear magnetic resonance, phase transitions, critical phenomena and the other related fields.

Grateful acknowledgment is made to Dr. Hirokazu Nakayama in Osaka University for support and assistance based on his experience about the IC system in the present study, and Drs. Yoshito Onoda, Masataka Tansho and Yoshishige Uchida in National Institute for Research in Inorganic Materials for their kind help in operating the MSL-400 NMR system.

It remains for me to thank Drs. Hitoshi Shoji, Riki Seki, Hiroshi Ohki, Subratanath Konor, Noriko Onoda-Yamamuro, Ashutosh Ghosh, Isoroku Nagasawa and Yukihiro Yokoyama and all my colleagues for their support and assistance.
