

A Decay of Gap Junctions between Neuronal
Progenitor Cells and Ganglion Cell Differentiation
during Retinal Regeneration of Adult Newt (*Cynops
pyrrhogaster*)

Hanako OI

A dissertation submitted to the Doctoral Program
in Biological Sciences, the University of Tsukuba
in partial fulfillment of the requirements
for the degree of Doctor of Philosophy in Science

October 2003

Contents

	page
Contents -----	i
Abbreviations -----	iv
I Abstract -----	1
II General Introduction -----	3
1. Development of the vertebrate eye and structure of the retina	
2. Retinal synapses	
3. Regeneration of the vertebrate retina	
4. Aims of the present study	

Chapter 1

Disappearance of gap junction channels and the appearance and maturation of voltage-gated Na ⁺ channels during retinal regeneration -----	9
1. Introduction -----	10
2. Materials and Methods -----	12
2.1. Preparations of retinal slice	
2.2. Experimental solutions and drugs	
2.3. Electrophysiological recordings	
2.4. Intracellular staining	
2.5. Definition of stages of regenerating retina	
3. Results -----	17
3.1. Electrical and tracer coupling between progenitor cells and its loss between premature ganglion cells	
3.2. 'Intermediate-I' regenerating retina	
3.3. 'Intermediate-II' regenerating retina	
3.4. 'Intermediate-III' and 'late' regenerating retina	

3.5.	Peripheral retina	
3.6.	Control retina	
3.7.	Appearance and maturation of ganglion cells during retinal regeneration	
4.	Discussion	26
4.1.	Gap junctions between progenitor cells	
4.2.	Loss of gap junctions between progenitor cells during cellular differentiation	
4.3.	Reappearance of gap junctions between matured ganglion cells	
4.4.	Appearance and maturation of Na ⁺ currents during regeneration	

Chapter 2

Appearance and maturation of neurotransmitter channels during retinal regeneration	32
1. Introduction	33
2. Materials and Methods	35
2.1. Slice preparation	
2.2. Whole-cell patch-clamp recording in retinal slices	
2.3. Experimental solutions and drug applications	
2.4. Intracellular staining	
2.5. Definition of regenerating stages	
3. Results	39
3.1. Whole-cell current recordings from ganglion cells in control retina	
3.2. Whole-cell current recordings from ganglion cells in regenerating retinas	

3.3.	The I-V relationships of ganglion cells in regenerating retinas	
3.4.	Effects of amino acid receptor antagonists on ganglion cells in regenerating retinas	
4.	Discussion -----	47
4.1.	Onset of excitatory and inhibitory amino acid receptors	
4.2.	Maturational changes in excitatory and inhibitory amino acid receptors	
4.3.	Properties of excitatory and inhibitory amino acid-induced currents during regeneration	
4.4.	Significance of early expression of neurotransmitter receptors	
III	General Discussion -----	53
IV	Acknowledgements -----	61
V	Literature Cited -----	63
VI	Figures and Legends -----	81
VII	Tables -----	134
