Group Actions and Integral Geometry

Takashi SAKAI

A dissertation submitted to the Doctoral Program
in Mathematics, the University of Tsukuba
in partial fulfillment of the requirements
for the degree of Doctor of Philosophy in Science

January, 2003

寄贈
酒井高司氏

03302715

Acknowledgements

I would like to express my sincere gratitude to Professor Hiroyuki Tasaki for his valuable suggestions filled with his deep insight into mathematics and constant encouragements. I am much obliged to Professor Osamu Ikawa in Department of General Education, Fukushima National College of Technology, and Professor Masaro Takahashi in Department of General Education, Kurume National College of Technology. It is so lucky for me that they were staying in University of Tsukuba for one year while I am in the course of Ph. D.. I also thank to Doctor Hong Jae Kang for his appropriate advices and helpful discussions.

Takashi Sakai

Contents

Introduction	1
1 Orbits of group actions	5
1.1 Lie transformation group	5
1.2 R -spaces	8
1.3 Orbits of Hermann actions	11
2 Poincaré formulas	19
2.1 Coarea formula	19
2.2 Generalized Poincaré formula	20
2.3 Examples of Poicaré formula	28
2.3.1 The case of real space forms	28
2.3.2 The case of complex space forms	30
2.3.3 The case of two point homogeneous spaces	34
2.3.4 Other examples	36
2.4 Poincaré formula of complex submanifolds	38
3 Kinematic formulas	46
3.1 Second fundamental form of an intersection	46
3.2 Kinematic formulas for hypersurfaces in real space forms . . .	49
3.3 Further remarks	57
