

ACKNOWLEDEMENTS

I pay my deepest thanks to my academic advisor, Professor Kenshiro Ogasawara, Institute of Geoscience, the University of Tsukuba, Japan. My studies would have not been possible without his proper supervision. I will always remember him for his consistent moral support and encouragement during entire course of my research work for doctoral studies.

I would particularly like to express my indebtedness to both of my previous supervisors: Professor Hiroshi Noda, and Dr. Hiro'o Natori of the Institute of the Geoscience, the University of Tsukuba, and the Geological Survey of Japan, respectively, for their supervision, advice and proper guidance, especially during my studies for Master degree (MSc.). Time to time discussions related to taxonomic problems with Dr. H. Noda will always be remembered.

I wish to express my deep gratitude and thanks to Professor Hiroshi Nishi of Kyushu University, Japan, for his consistent advice and constructive criticism during the identification of the planktonic foraminifera.

I also render my thanks to Professor Ritsuo Nomura of the Department of Micropaleontology, Shimane University, Japan, for his help in the identification of the benthic foraminifer.

I also would like to express my gratitude and indebtedness to Dr. Y. Ogawa and Dr. Go'ksenin Eseller of the University of Tsukuba for letting me join

the lecture series "Carbonate diagenesis and their depositional environment" arranged in the laboratory of structural geology under Dr. Y. Ogawa.

Especially, I would like to express my sincere gratitude to Dr. Go"ksenin Eseller (from Turkey) who helped me a lot during my thin-section studies on carbonate facies analysis. The discussions with him proved very fruitful for me in interpreting the depositional environment of the shallow to deep marine Paleogene sequence that was the focus of this research.

Thanks are due to Dr. William A Berggren and Dr. Richard K. Olsson, for valuable discussions with them during an international conference (Foram'98), and for sending me some important related literature.

I would like to take this opportunity to thank the Japanese Ministry of Education and Culture (Monbusho) for research scholarship they provided me without which I would have not been able to come to Japan to conduct such a comprehensive research plan during which I completed my Master (Msc) as well as Doctor (Ph.D) Degrees.

I also would to pay my thanks to many individuals who contributed a lot during my field work in Pakistan and studies in the University of Tsukuba, Japan: To Dr. H. Tokuhashi and Dr. T. Naka of the Geological Survey of Japan, for helping me in getting access to very important related literature stored in the library of the Geological Survey of Japan; to Dr. K. Ohkushi and Dr. S. Kawagata of the University of Tsukuba for valuable discussions and help received during the preparation of this manuscript; to Mr. Ohno for helping and teaching me about the

use of scanning electron microscope (SEM); to Mr. Abdul Majeed, Mr. Muhammad Shafeeque Akram and their colleagues of the Pakistan Atomic Energy Commission, Pakistan, for their great help during the field work in Pakistan; to my two brothers Abdul Rehman Anjum Warraich and Qammar Abbass Warraich for being with me during all of my field works. I will never forget their sincere service as field porter, cook and nice friends, without them I might have not been able to conduct successful field surveys in such difficult and remote areas.

I would like to mention about Dr. Jiro Hirayama who initially inspired me about this research when I was working as counterpart to him in a JICA sponsored project in Pakistan, later in Japan, he has been constantly helping me morally to make my life enjoyable here in Japan.

I would like to mention my fellow researchers: H. Hara; M. Herai; T. Kaku; K. Mizuno; J.K. Banda; Devi Hussein; R. Nakajima; Y. Kurihara; L. P. de. Silva; R. L. Elsa; C. T. Titima, and M. Marlar, with whom I always shared a cup of Japanese tea (Kocha) or Coffee (Kohee) and have been very keen to me during my entire stay, here in the Institute of Geoscience, University of Tsukuba, Japan. I shall always miss my time spent in their kind company.
