

## ACKNOWLEDGEMENTS

This work was partly supported by the special Coordination Fund from the Science and Technology Agency of Japan.

I'd like to express my sincere gratitude to Dr. Tadao Ohno, the director of RIKEN Gene Bank, the Institute of Physical and Chemical Research for his constant guidance and financial support throughout the whole course of this study. I'm also grateful to Ms. Kaoru Saijo, Mayako Kato, and Emi Iimura for their technical help.

I'd like to give my thanks to Dr. Masatoshi Matsumura, professor of Institute of Applied Biochemistry, University of Tsukuba for revising this Ph. D thesis.
