**Dynamic Behavior of a Hollowed,
Cylindrical Soil Specimen
under Cyclic Torsional Shear Loading**

**Division of Agricultural and Forest Engineering
Doctoral Degree Program in Agricultural Sciences
University of Tsukuba**

Table of contents

Title page	i
Table of contents	ii
Notation	vi
List of tables	viii
List of figures	ix
Chapter 1 Introduction	1
1.1 Background of the study	1
1.2 Objectives	2
Chapter 2 Literature review	4
2.1 Soil compaction	4
2.1.1 Definition and nature of soil compaction	4
2.1.2 Causes of soil compaction	4
2.1.3 Effects of soil compaction	5
2.1.4 Researches needed on soil compaction	5
2.2 Current situation of researches on soil compaction	6
2.2.1 Behavior of traffic-induced soil compaction	6
2.2.2 Methods to estimate soil compaction	8
2.2.3 Other parameters affecting soil compaction	10
2.2.4 Influences of soil compaction on growing plant	10
2.2.5 Degree of compactness suitable for growing plant	11
2.2.6 Reduction of soil compaction in a field	12
2.2.7 Effects of soil compaction on the quality of the environment	13
2.2.8 Chemical and biological effects of soil compaction	13

2.3 Stress on soil	14
2.3.1 The stress state on soil	14
2.3.1.1 Effective stress	15
2.3.1.2 State space	16
2.3.2 Stress induced by traffic wheel	18
2.3.2.1 Estimated stress distribution	18
2.3.2.2 Stress beneath traffic wheel	19
2.4 The cyclic loading test	21
2.5 Rationality of using cyclic torsional shear loading test in simulating traffic-induced loading system	23
Chapter 3 Cyclic behavior of soil and interrelationships among parameters involved	25
3.1 Introduction	25
3.2 Methodology	26
3.2.1 Material	26
3.2.2 Preparation of specimen	27
3.2.3 Test procedure	28
3.2.4 Test apparatus	30
3.2.5 Theoretical description	31
3.2.6 Test combinations	32
3.3 Results and discussion	34
3.3.1 Soil behavior under cyclic torsional shear loading	34
3.3.2 Effect of cyclic torsional shear stress	37
3.3.3 Effect of loading frequency	40
3.3.4 Effect of bulk density	43

3.3.5 Effect of confining stress	45
3.3.6 Torsional shear strain and effective stress ratio	46
3.4 Summary	48
Chapter 4 Dynamic shear strength of soil under cyclic torsional shear loading	49
4.1 Introduction	49
4.2 Methodology	50
4.3 Results and discussion	54
4.3.1 Failure characteristics of soil	54
4.3.2 Dynamic shear strength behavior	57
4.3.3 Residual torsional shear strain	63
4.3.4 Critical state behavior	65
4.3.5 N_c at failure and some parameters involved	67
4.4 Summary	70
Chapter 5 Influence of loading and loading-free processes of cyclic torsional shear to soil compaction	72
5.1 Introduction	72
5.2 Methodology	73
5.3 Results and discussion	74
5.3.1 Dynamic soil responses	74
5.3.2 Comparison with cyclic torsional shear loading test	78
5.3.3 Effects of loading magnitude, N_c and bulk density	81
5.3.4 Stress path in state space	88
5.4 Summary	90
Chapter 6 Conclusions and recommendations	92
Acknowledgments	95

References	98
Appendix-A Test apparatus	109
Appendix-B Example of soil specimen after test	112
Appendix-C Selected results of torsional shear stress, strain and pore water pressure recorded	113
