目次

| | | |
|------------|----------------------|-----------|
| 第1章 | 緒論 | 1 |
| 1.1 | 本研究の背景 | 1 |
| 1.2 | 従来の研究 | 3 |
| 1.3 | 研究の目的 | 6 |
| 1.4 | 本論文の構成 | 7 |
| 第2章 | 長尺物の水平面内の協調運搬 | 10 |
| 2.1 | 緒言 | 10 |
| 2.2 | 仮想非ホロノミック拘束の導入 | 11 |
| 2.3 | 可制御性の証明 | 13 |
| 2.4 | インピーダンス制御による拘束の実現 | 14 |
| 2.4.1 | インピーダンス制御における対象物の挙動 | 15 |
| 2.4.2 | 異方性インピーダンス制御 | 17 |
| 2.4.3 | 仮想非ホロノミック拘束の実現 | 18 |
| 2.5 | 仮想非ホロノミック拘束を用いた協調運搬 | 19 |
| 2.6 | 検証実験 | 21 |
| 2.6.1 | 実験装置の構成 | 21 |
| 2.6.2 | インピーダンス制御器 | 21 |
| 2.6.3 | 水平面内の協調運搬実験 | 25 |
| 2.7 | 結言 | 34 |
| 第3章 | 3次元空間内の協調運搬 | 36 |
| 3.1 | 緒言 | 36 |
| 3.2 | 鉛直平面内の協調運搬 | 37 |
| 3.2.1 | 鉛直平面内の非ホロノミック拘束 | 37 |
| 3.2.2 | 協調運搬における重量の補助 | 38 |
| 3.2.3 | 鉛直平面内の協調運搬実験 | 41 |
| 3.2.4 | 鉛直平面内の実験の考察 | 43 |
| 3.3 | 3次元空間内の協調運搬 | 45 |
| 3.3.1 | 3次元空間内の非ホロノミック拘束 | 45 |
| 3.3.2 | 3次元空間内の可制御性の証明 | 48 |
| 3.3.3 | 手先座標系における異方性インピーダンス | 50 |
| 3.3.4 | 3次元空間内の協調運搬実験 | 51 |
| 3.4 | 結言 | 51 |

| | |
|-----------------------------------|------------|
| 第4章 移動マニピュレータを用いた協調運搬 | 55 |
| 4.1 緒言 | 55 |
| 4.2 移動台車への非ホロノミック運搬手法の導入 | 56 |
| 4.3 移動台車主体の協調運搬 | 59 |
| 4.3.1 冗長自由度を利用した移動マニピュレータの制御 | 60 |
| 4.3.2 非ホロノミック移動台車を備えた移動マニピュレータの制御 | 62 |
| 4.3.3 検証実験 | 63 |
| 4.4 マニピュレータ主体の協調運搬 | 72 |
| 4.4.1 並進移動の制御則 | 73 |
| 4.4.2 回転移動の制御則 | 76 |
| 4.4.3 シミュレーション | 78 |
| 4.4.4 移動マニピュレータによる検証実験 | 82 |
| 4.5 結言 | 84 |
| 第5章 結論 | 90 |
| 謝辞 | 92 |
| 参考文献 | 93 |
| 関連業績一覧 | 100 |

目 次

| | | |
|------|--|----|
| 1.1 | Human-robot cooperative manipulation. | 8 |
| 1.2 | Cooperative manipulation of long object. | 9 |
| 2.1 | Example of cornering. | 11 |
| 2.2 | Example of tool. | 12 |
| 2.3 | Example of transportation. | 13 |
| 2.4 | Virtual nonholonomic constraint. | 13 |
| 2.5 | Impedance control of long object. | 15 |
| 2.6 | Operation by a couple of force. | 16 |
| 2.7 | Constraint to the desired trajectory. | 18 |
| 2.8 | Impedance control for virtual constraint. | 20 |
| 2.9 | Virtual constraint for various cooperation. | 22 |
| 2.10 | Transport to the wall side. | 22 |
| 2.11 | Experimental setup. | 23 |
| 2.12 | Experimental apparatus. | 24 |
| 2.13 | Sideslip with isotropic impedance control. | 27 |
| 2.14 | Sideslip with virtual nonholonomic constraint. | 28 |
| 2.15 | Trajectory of object (isotropic impedance control). | 29 |
| 2.16 | Trajectory of object (virtual nonholonomic constraint). | 29 |
| 2.17 | Trajectory of object without torque control (isotropic impedance control). | 31 |
| 2.18 | Trajectory of object without torque control (virtual nonholonomic constraint). | 31 |
| 2.19 | Target pointer and target marker for experiment. | 32 |
| 2.20 | Initial positions and a target position. | 32 |
| 2.21 | Transportation referring a real target (isotropic impedance control). | 33 |
| 2.22 | Transportation referring a real target (virtual nonholonomic constraint). | 33 |
| 3.1 | Nonholonomic constraint in vertical plane. | 38 |
| 3.2 | Human-robot sharing the load at horizontal posture. | 40 |
| 3.3 | Human-robot sharing the load at inclined posture. | 40 |
| 3.4 | Trajectory of object referring targets in the monitor display(short object). | 42 |
| 3.5 | Trajectory of object referring targets in the monitor display(long object). | 42 |
| 3.6 | Experimental setup for referring a real target. | 44 |
| 3.7 | Trajectory of object referring a real target. | 44 |
| 3.8 | Rotation about hand coordinate frame. | 45 |
| 3.9 | Rotation about P -axis. | 47 |

| | | |
|------|---|----|
| 3.10 | Example of the singular posture. | 47 |
| 3.11 | Rotation about Q -axis. | 48 |
| 3.12 | Control forces and robot motion. | 48 |
| 3.13 | Experiment of 3-D transportation. | 52 |
| 3.14 | Experimental result (rotation about Y, Z -axes). | 52 |
| 3.15 | Experimental result (rotation about X, Y, Z -axes). | 52 |
| 3.16 | Rotation angle about X -axis. | 53 |
| | | |
| 4.1 | Nonholonomic vehicle model with two wheels. | 57 |
| 4.2 | Nonholonomic vehicle model like an automobile. | 57 |
| 4.3 | Holonomic vehicle model. | 58 |
| 4.4 | Manipulator on the holonomic vehicle. | 60 |
| 4.5 | Nonholonomic mobile manipulator with caster action. | 63 |
| 4.6 | Size of mobile manipulator. | 64 |
| 4.7 | Mobile manipulator(photo). | 65 |
| 4.8 | System components. | 66 |
| 4.9 | Experimental setup. | 66 |
| 4.10 | Transportation from the floor onto the desk (photos). | 67 |
| 4.11 | Trajectories and velocities. | 67 |
| 4.12 | Support force and pitch angle. | 69 |
| 4.13 | Target position and initial position. | 69 |
| 4.14 | Transportation to the corner (photos). | 70 |
| 4.15 | Experimental result(trajectories). | 71 |
| 4.16 | Support force, pitch angle and height. | 71 |
| 4.17 | Preferred operating region design. | 73 |
| 4.18 | Dynamic model of mobile manipulator. | 74 |
| 4.19 | Nonlinear spring model. | 76 |
| 4.20 | Rotation problems. | 77 |
| 4.21 | Rotation model. | 78 |
| 4.22 | Workspace about manipulator. | 80 |
| 4.23 | Setup of simulator. | 81 |
| 4.24 | Simulation results. | 81 |
| 4.25 | Trajectories of simulation. | 82 |
| 4.26 | Target position and initial position. | 84 |
| 4.27 | Transportation from the floor onto the desk (photos). | 85 |
| 4.28 | Experimental result (trajectories). | 85 |
| 4.29 | Manipulability and mobile base positions. | 86 |
| 4.30 | Support force and Euler angles. | 87 |
| 4.31 | X -axis force and manipulator tip position in the mobile base coordinate. | 88 |
