Contents

1	INTRODUCTION	3
1.1	The Development of Radio Communications	3
1.2	Progress in Cavity-Backed Slot Antenna Study	5
1.3	Rectangular-Cavity-Backed Slot Antenna	9
1.4	Composition of the Dissertation	11
2	MOMENT METHOD FORMULATION	14
2.1	Theoretical Model and Boundary Conditions	14
2.2	Moment Method Approximation	18
2.3	Network Equivalence	22
2.4	Admittance Matrix Inside the Cavity	23
2.5	Admittance Matrix Outside the Cavity	38
2.6	Total Admittance Matrix	39
3	CIRCULARLY POLARIZED ANTENNAS	40
3.1	Rectangular-Cavity-Backed Single Square Loop Slot Antenna	41
3.1.1	Antenna Structure	41
3.1.2	Conditions for Circular Polarization	42
3.1.3	Antenna Characteristics	46
3.1.4	Experimental Results	51
3.2	Rectangular-Cavity-Backed Two-Element Square Loop Slot Antenna	55
3.2.1	Antenna Structure	55
3.2.2	Conditions for Circular Polarization	56
3.2.3	Antenna Characteristics	58
3.2.4	Experimental Results	64
3.3	Rectangular-Cavity-Backed Two-Arm Square Spiral Slot Antenna	68
3.3.1	Antenna Structure	68
3.3.2	Circular Polarization Characteristics	69
3.4	Conclusions	73
4	OPTIMIZATION OF THE ANTENNA	74
4.1	Rectangular-Cavity-Backed Two-Element Rectangular Loop Slot Antenna	75

4.2	Antenna Structure	76
4.3	Numerical Results	77
4.3.1	Conditions for Circular Polarization	77
4.3.2	Input Impedance, VSWR and Axial Ratio Characteristics	78
4.3.3	The Bandwidth of VSWR and Axial Ratio	83
4.3.4	Axial Ratio in a Constant ϕ Plane	85
4.4	Experimental Results	87
4.5	Conclusions	91
5	THE DUAL-BAND ANTENNA	92
5.1	Rectangular-Cavity-Backed Single Arm Square Spiral Slot Antenna	92
5.2	Antenna Structure	93
5.3	Numerical Results	94
5.3.1	VSWR Characteristics	94
5.3.2	Magnetic Current Distribution	97
5.3.3	Radiation Patterns	98
5.4	Experimental Results	100
5.5	Conclusions	102
6	CONCLUSIONS	104
	REFERENCES	109
	APPENDIX	114
A.1	Antenna Impedance	114
A.2	Antenna Polarization	119
A.3	Convergence Characteristics of the Calculation	125
A.4	Circular Polarization for Spacecraft Communication	128
	ACKNOWLEDGMENTS	130
	THE LIST OF PAPERS BY SONG SHI	131
