

List of Figures

- 1-1. General outline of the system
- 3-1. Moving Light Displays (MLDs) experiment conducted by Johansson
- 3-2. Moving Light Displays (MLDs) of two people performing a folk dance in the dark
- 3-3. Significantly blurred sequence of images where almost no structure is present
- 3-4. Absolute motion often is not perceived as such
- 3-5. A demonstration of relative motion being extracted prior to common motion
- 3-6. Local mask patterns for the HLAC feature extraction
- 3-7. *Binary motion* image sequence formation
- 3-8. Feature extraction mechanism for the relative motion dependent features
- 3-9. Geometrical relations between the *reference* and *related* points
- 3-10. Dependency of recognition rate on the scale parameter l
- 4-1. Gesture trajectories in discriminant feature space for 4 classes of gestures
- 4-2. Output from the classifier
- 4-3. Combining an ensemble of classifiers operating at different resolution scales

- 5-1. Information processing flow performed by the Dynamic Buffer Structures (DBS)
- 5-2. Real-time gesture segmentation by the Dynamic Buffer Structures
- 6-1. Snapshots of some of the gestures used in Experiment 6.1 (MMDB data base)
- 6-2. Snapshots of some of the gestures used in Experiment 6.2.1 (single user)
- 6-3. Snapshots of some of the gestures used in Experiment 6.2.2 (different subjects)
- 6-4. Test results for the different subjects experiment 6.2.3
- 6-5. Test results for the different subjects experiment 6.2.2 using an ensemble of classifiers at different resolutions
- 6-6. Snapshots of some of the gestures used in Experiment 6.2.3
- 6-7. Snapshots of some of the gestures used in Experiment 6.2.4
- 6-8. Test results for the different subjects in experiment 6.2.4
- 6-9. Snapshots of some of the gestures used in Experiment 6.2.5
