

Index

- 4f
 - intra — transition, 4, 72, 79
 - electron, 4
 - shell, 4
- absorption
 - edge, 22, 67
 - spectra, 72
 - spectrum, 22, 58
- AlGaIn, 2
- aluminum (Al), 2
- ammonia (NH₃), 12
 - pressure, 12
- angular momentum (J), 84
- asymmetric, 38
- atomic force microscopy (AFM), 15, 33
- Auger transition, 58
- bond
 - length, 24, 48
- Bragg's law, 19
- breakdown
 - voltage, 2
- Brillouin
 - function, 86
- Burgers vector, 43
- carrier, 2
 - electron, 84
 - generation, 56
 - mediate emission mechanism, 63
 - mediated excitation, 7
 - recombination, 56
- cerium (Ce), 4
- channeling angular distribution, 46
- charge coupled device (CCD), 4
- cladding
 - layer, 2
- coherent potential approximation, 83
- coordination
 - number, 24, 48
- Coulomb force, 58
- covalent
 - radii, 76
 - radius, 38
- crystal
 - field, 4, 87
- cubic, 33, 46, 67
- Curie temperature, 81
- curve fitting, 24, 67
- Debye-Waller factor, 24, 48
- defect, 2, 76
 - level, 56, 58, 67, 72, 75, 79
 - related energy transfer, 63
 - donor-like —, 58
- diluted magnetic semiconductor(DMS), 81
- dip, 46
- dipole
 - -dipole interaction, 58
 - electric — transition, 53, 79
 - magnetic — transition, 53, 79
- dislocation, 2

- mixed type threading —, 43
 - screw threading —, 43
 - threading —, 28
 - edge —, 43
- electro luminescence (EL), 63
- electron
 - hot —, 7, 63
 - beam, 14
 - drift velocity, 2
 - exchange interaction, 58
 - hole pair (EHP), 2, 56, 72
 - phonon coupling, 4
 - ic devices, 2
- emission
 - efficiency, 2, 50, 63
 - intensity, 4, 53
 - green —, 66, 72
 - near band-edge —, 50
 - red —, 50, 72
- energy
 - back transfer, 53
 - conversion, 2
 - level, 4
 - transfer, 27, 56, 58, 72, 75, 89
 - activation —, 53
 - defect related — transfer, 58, 72
 - recombination —, 56
 - resonant — transfer, 58
- erbium (Er), 4, 8, 53, 66, 67, 72, 83
- EuN, 48, 50, 63, 76
- europium (Eu), 4, 7, 32, 33, 38, 46, 50, 56, 67, 72
- exciton, 56
 - bound —, 58
- exponential
 - decay, 50
 - model, 53
- extended X-ray absorption fine structure (EX-AFS), 22, 46, 50, 67
- external quantum efficiency, 56
- facet, 38
- ferromagnetism, 83
- fluorescence, 48
- Fourier filtering, 48
- Fourier transform (FT), 23, 48
 - infrared spectroscopy (FT-IR), 27, 58, 72
- frequency factor, 53
- full width at half maximum (FWHM), 28, 38, 43
- gallium (Ga), 12, 22
 - vacancy, 76
- goniometer, 19
- heterojunction field effect transistors(HFETs), 2
- hexagonal, 33, 43, 46
- high electron mobility transistors (HEMTs), 2
- hole
 - density, 28
- hysteresis, 84
- image processor, 4
- incorporation
 - site, 46
- indium (In), 2
- InGaAlP, 2
- InGaN, 2
- InN, 2
- interstitial lattice site, 46
- ion - ion interaction, 50
- Josephson junction, 27

- Knudsen effusion cell, 12
- Korringa-Kohn-Rostoker method, 83
- laser diode (LD), 2
 - ultra violet (UV) —, 2
- lattice
 - mismatching, 2
 - spacing, 19
- light emitting diode (LED), 2, 56
 - monolithic —, 4
 - white —, 2
- local
 - structure, 46
- luminescence, 4, 7
 - intensity, 50
 - lifetime, 4
 - property, 50
 - quenching, 50
 - cathode —, 7
 - electro —, 7
- magnetic
 - anisotropy, 87
- magnetization
 - (M-H) curve, 83
- manganese (Mn), 83
- metal-insulator-semiconductor (MIS) structure, 63
- Michelson interferometer, 27
- mobility (μ), 28
- molecular beam epitaxy (MBE)
 - gas source — (GSMBE), 12
- molybdenum (Mo)
 - cotaing, 12
- nitrogen (N), 12, 48, 67, 79
 - vacancy, 58
- nontoxic, 2
- paramagnetic, 87
- parity, 79
 - allowed transition, 53
 - forbidden transition, 79
- peak
 - shift, 38
- phase
 - function, 24
 - separation, 2
 - shift, 48
- photo-calorimetric spectroscopy (PCS), 56
- photoluminescence (PL), 67, 72
 - excitation (PLE), 27, 56, 58
 - intensity, 50, 58
 - spectroscopy, 24
- piezoelectric
 - field, 2
- PN junction, 56, 63
- pole figure, 46
- poly
 - crystalline growth, 33
- positron
 - annihilation, 76
 - annihilation, 76
- precipitate, 84
- quadrupole mass spectograph (QMS), 12
- quantum well
 - multi — (MQL), 2
 - single — (SQL), 2
- radial distribution function (RDF), 24, 67
- rare earth (RE)
 - doped GaN, 7, 84, 89
 - doping into GaN, 2
- reciprocal
 - lattice, 19
 - lattice mapping, 19, 46

- recombination
 - probability, 2
 - non-radiative —, 58
- Reflection High Energy Electron Diffraction (RHEED), 12, 33, 38, 46
- ring
 - pattern, 33
- root mean square (RMS)
 - roughness, 33
- Ruderman-Kittel-Kasuya-Yoshida (RKKY) interaction, 84
- Rutherford back-scattering (RBS), 19, 46, 58
 - /ion channeling, 22, 46
- samarium (Sm), 4
 - SmCo₅, 81
- sapphire (Al₂O₃), 12, 72, 76
- satellite peak, 47
- scanning electron microscope (SEM), 17, 38
- selected area diffraction (SAD) pattern, 28
- silicon (Si), 63
- single
 - crystalline growth, 33, 66
- spin, 82
 - orbit interaction, 4
- spintronics
 - semiconductor —, 81
- spotty
 - pattern, 33, 46
- stacking
 - direction, 46
 - fault, 46, 67
- strain, 46, 67
 - relaxation mechanism, 46
- substitutional lattice site, 46
- Superconducting quantum interference device (SQUID), 27, 83
- symmetric, 38
- symmetry
 - coordination —, 79
 - tetrahedral —, 67
- synchrotron
 - radiation, 23
- terbium (Tb), 4, 8, 66, 67, 83
- thermal
 - quenching, 53
 - quenching, 4
 - stability, 2
- thulium (Tm), 4
- tilt, 19
- transmission electron microscope (TEM), 16, 33, 46
- trap
 - level, 58
- twin, 33, 38, 67
- twist, 19
- valuable leak valve, 12
- weighting scheme, 24
- window-function, 24
- X-ray diffraction (XRD), 17, 28, 38, 48, 50, 67
 - ω - 2θ mode —, 38
 - ω - scan —, 46
 - θ - 2θ mode —, 46
- ytterbium (Yb), 4
- yttrium aluminum garnet (YAG)
 - phosphor, 2
